

TEXAS STATEWIDE SURVEY

Interviewing dates: January 22-29, 2017

ADULT RESPONDENTS: This statewide survey of N=1,201 adults was conducted January 22-29. Quotas were established based on the most recent adult population estimates in each county provided by Texas State Data Center.

The confidence interval associated with the results of 1,201 adult respondents is such that 95% of the time the results will be within +/- 2.8% of the “true values” where “true values” refer to the results obtained if it were possible to interview every adult in the state. The results in this survey were weighted slightly to reflect the actual racial/ethnic distribution and ages for each region of the state.

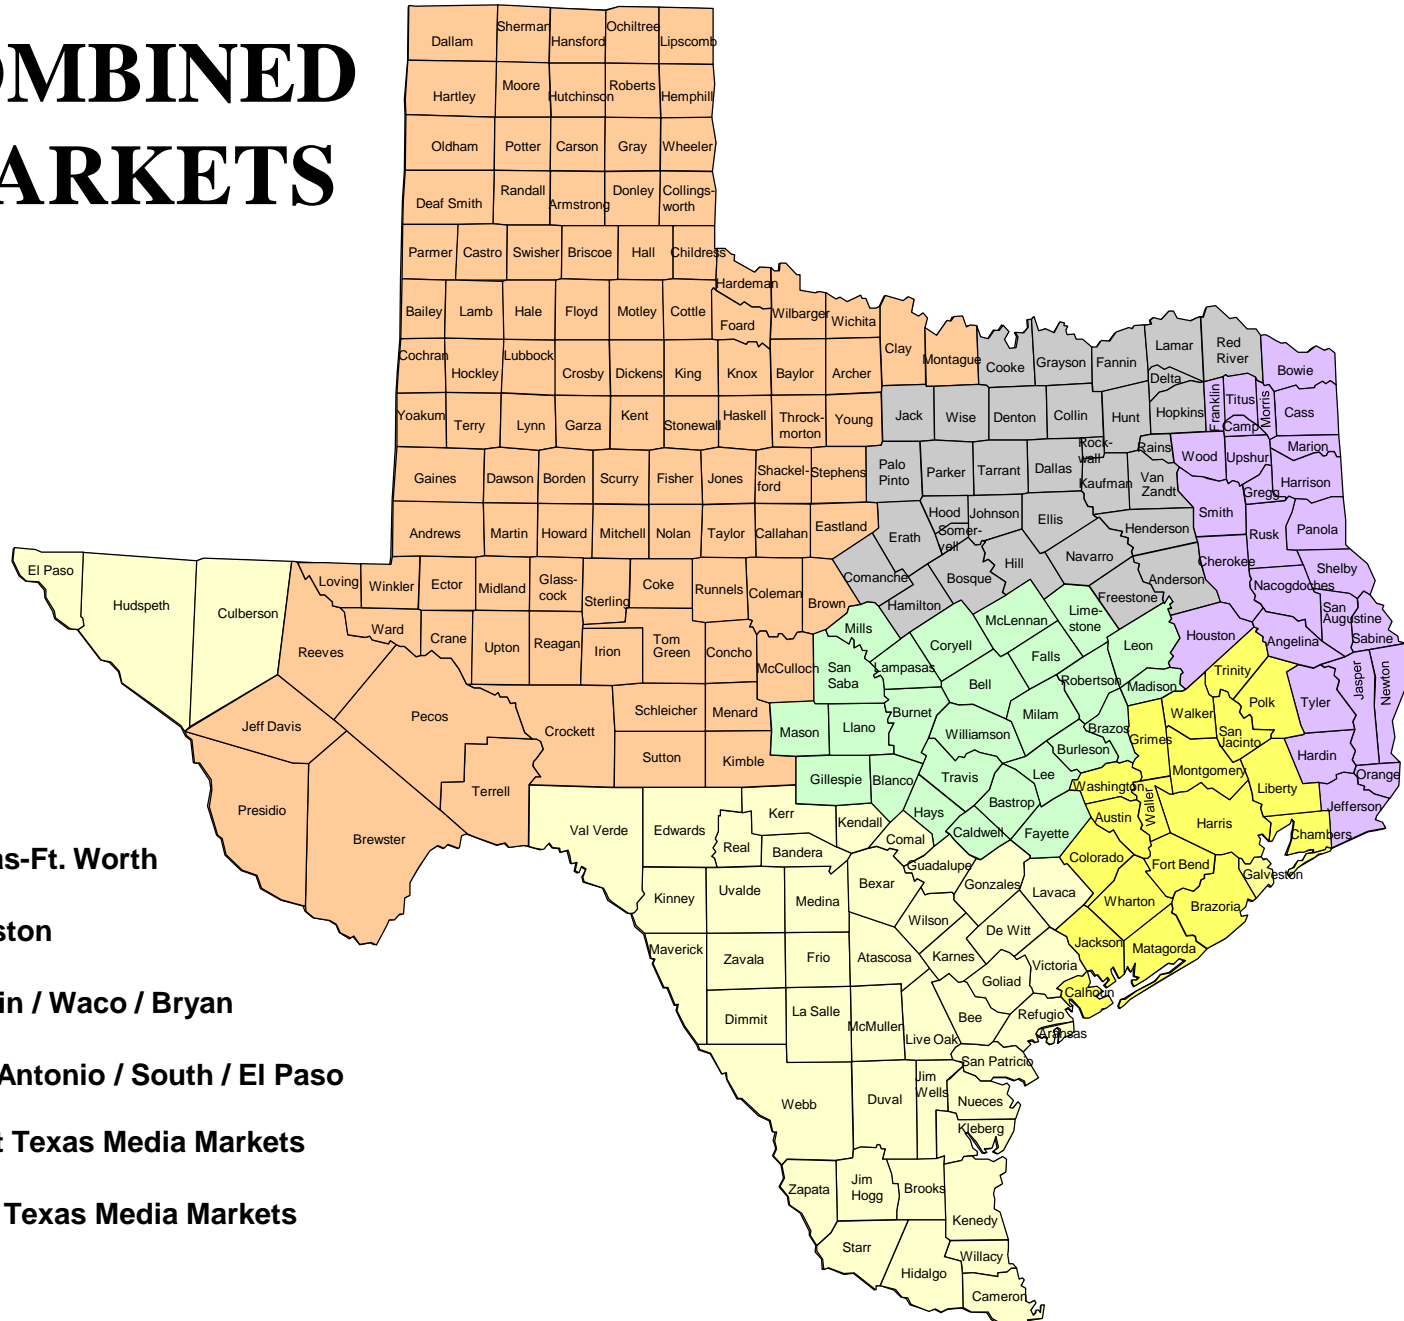

Forty percent (40%) of the adult interviews were completed among respondents with landline telephones, and 33% of the interviews were completed among respondents with cell phones. The remaining 27% of the adult interviews were conducted via the internet.

REGISTERED VOTERS: The adult respondents were asked if they were registered to vote. The respondents who were registered to vote were weighted to be representative of the actual distribution of voters in the 2016 general election for each region of the state.

The confidence interval associated with the results of the N=922 registered voters is such that 95% of the time the results will be within +/-3.2% of the “true values” where “true values” refer to the results obtained if it were possible to interview every registered voter in the state. The results to the registered voter portion of this survey were weighted slightly to reflect the actual partisan vote behavior, the racial/ethnic distribution of voters, and the presidential election year voting age distribution for each region of the state.

Forty-four percent (44%) of the registered voter interviews were completed among respondents with landline telephones, and 29% of the interviews were completed among respondents with cell phones. Another 27% of the voter interviews were conducted via the internet.
