

APP STORE ACCOUNTABILITY ACT

WRITTEN BY **Greyson Gee**, Better Tech for Tomorrow
APRIL 2025

THE PROBLEM

American children are facing a civilizational crisis due to the harms fomented by digital devices and services. The evidence is overwhelming:

- **56%** of 13 to 17-year-olds had Mind Health Quotient (MHQ) scores in the distressed or struggling range, compared with 20% for their adult counterparts.
- **51%** of American children report being detached from reality, with more than half acknowledging that constant feelings of sadness, guilt, fear, and anxiety cause serious problems in everyday life.
- Feelings of anger, irritability, aggression, and debilitating hallucinations were found in much higher concentrations in 13-year-olds compared to their older counterparts.

As revealed by the now infamous Facebook Files, social media companies and other digital service providers employ a strategy of addiction, targeting children and teens for as long as possible to scrape every morsel of sensitive information they can.

Consider these alarming statistics:

- Children ages 8 to 12 in the United States spend **4 to 6 hours a day** watching or using screens.
- Teens spend up to **9 hours daily** on screens.
- Nearly all teens (**95%**) report having access to a smartphone, up from 73% in 2014-2015.
- The share of teens reporting being online “almost constantly” has roughly doubled since 2014-2015 (46% vs. 24%).

TEXAS PARENTS WANT CHANGE

Recent polling by the Texas Public Policy Foundation shows overwhelming support for action:

- **75%** of Texas voters support requiring app stores to get parental approval for teens to download apps.
- **79%** of Texas parents specifically support such requirements.
- **88%** of Texas Republican voters support these measures.

THE SOLUTION

The App Store Accountability Act (SB 2420 by Senator Angela Paxton and HB 4901 by Representative Caroline Fairly) extends the framework established by previous state-level laws and proven safeguards aimed at protecting children from harmful digital products.

WHAT THE LEGISLATION DOES

The App Store Accountability Act would:

- **Require robust age verification** when creating an account with an app store using a commercially reasonable method. App stores would categorize users as: child (younger than 13), younger teenager (13 to 16), older teenager (16 to 18), and adults (over 18).
- **Mandate parental oversight** by requiring minor accounts to be affiliated with that of a parent or guardian, empowering parents to provide consent for app downloads or in-app purchases.
- **Ensure accurate age ratings** on individual apps as they relate to the newly established age categories.
- **Establish strong data privacy standards**, including data minimization, deletion of personal data used to verify age, and enhanced security for any personal information transmitted.
- **Create accountability** by making failures to meet these requirements a deceptive trade practice, enforceable by the Texas attorney general.
